

**As the Holiday Season is Quickly Approaching,  
so are Inclement Weather Conditions**

Dragon Jacket put competition insulation up to the challenge of enduring baseball-sized hail simulated with a pitching machine. The competing insulation experienced significant damage after the first hit, and after the second and third contacts, the damage was so extensive that the jacketing began to break away from the insulation. Dragon Jacket maintained its structure and remained completely undamaged after absorbing twice as many direct hits.

Imagine the damage after more than a few minutes of hail the size of baseballs, or the damage after hail the size of golf balls. With damaged jacketing, the competition's insulation is left exposed, and the R-value greatly reduced because the damaged areas allow moisture to infiltrate the insulation, which then begins the process of CUI.

Dragon Jacket has the ability to withstand all that Mother Nature can "throw" at it, while not only maintaining its shape and durability, but also its R-value and insulation properties.

**Product Innovation**

Dragon Jacket continues to revolutionize the industrial insulation industry by introducing two new fittings to the product line up.

**The Transmitter Cover** insulates transmitters to maintain accurate gas pressure measurement while allowing workers to access the transmitter without having to completely remove the insulation. The fitting requires open and close installation, and is made from 2lb. foam and polyurea.

**The Splice Cover** introduces a new way to cover any open ended modifications made in the field, and is made from 100% polyurea.

## Distributing Dragon Jacket

### **Dragon Jacket Insulates its way into Canada with Fluid Project Supply**

Dragon Jacket has signed a distribution agreement with Fluid Project Supply, a Canadian Marketing and Distribution company specializing in piping, located in Calgary, AB. Fluid Project Supply was founded in 2014 by veteran members of the Oilfield Services and Water Management industries.

FPS seeks to provide their customers with innovative products that add value to their operations. Their founders' experience and expertise helps them identify these products, and communicate their efficiency to their customers.

"Dragon Jacket functions as an insulation that holds up in tough physical conditions and is reusable. This is a great combination to offer to our customers and is exactly the type of innovative solution that we take pride in showing to our clients," said Mitch Furlong, Project Manager and Procurement Coordinator at Fluid Project Supply.

Fluid Project Supply has previously marketed and distributed products to customers including: The City of Calgary, the City of Red Deer, Secure Energy Services, Standard General and Morgan Construction, just to name a few.

FPS and Dragon Jacket met with members of a large chemical company's Innovation Team at the Global Petroleum Show in Calgary, AB. The company's team was very impressed with Dragon Jacket's products and invited Dragon Jacket and Fluid Project Supply to present at their annual Innovation Day at their main Canadian facility in Fort Saskatchewan, AB.

At Innovation Day, many of the staff at the company were also very impressed by the Dragon Jacket

product line, and were very eager to move forward to review the product in more detail and explore opportunities for use. The unique characteristic of Dragon Jacket's products is that the closed cell foam core is fully encapsulated by an integrated polyurea jacket, thus eliminated moisture penetration and significantly reducing CUI.

"Many of FPS's customers are concerned with CUI, and as such we pose the Dragon Jacket Insulation System as a solution. We are hoping to triple our sales in 2017 through marketing and the rise in the price of oil and we believe that Dragon Jacket will constitute at least half of that increase," noted Mitch Furlong.

### **Standard Polymers Insulates the Midwest with Dragon Jacket**

Standard Polymers began as a small industrial coating distributor; but has developed into a group with more than twenty five years in the industrial coatings business, that travels nation-wide providing solutions to industrial corrosion issues.

Standard Polymers currently serves the Grain Processing, Food & Beverage, Bio Fuel, Chemical Process, OEM, Bridges & Highways, Power, Water & Wastewater, and General Industries

Specific testing of materials is required for any product that Standard Polymers represents or distributes.

Standard Polymers is currently distributing Dragon Jacket in the following areas: NE, KS, IA, MO, IL, IN, OH, and WI.
