

Dragon Jacket Releases Two New Product Lines to the Industrial Insulation Market

Hayden, Idaho, DATE- Dragon Jacket continues revolutionizing the industrial insulation market with the most versatile insulation products available by introducing two new product lines. The Patented Insulated Pipe Saddle and Pocketed Coupling lines bring new innovation across multiple industrial applications, and like Dragon Jacket's other products is rated in Class A of the International Fire Code.

"We are all very impressed with your product and the fact that you can customize to suit our needs is all the better. Your product will make installation much easier than what we've had to do in the past," noted a local Mining Company

Dragon Jacket's Insulated Pipe Saddle line has a minimum compressive strength of 900 PSI, and insulates pipe from mounting brackets, as well as creates connection points for existing or additional insulation. The Insulated Pipe saddle may be mounted vertically or horizontally, and installed with a U-bolt connection.

"As a result of my visit to a local mine, I came to understand that the process in which they currently use to hang the pipes from the ceiling to facilitate the run of the line was both time consuming and inefficient. This fitting resolves both of those issues, and also embraces the pipe and lifts it into place in a fraction of the time, with no exposed pipe upon completion," stated Adrian Zettell, Inventor and VP of Production at Dragon Jacket.

"The Dragon Jacket Insulated Pipe Saddle is a game-changer. It's easy to install on pipe racks where insulation is required and also minimizes safety risks associated with awkward installation locations," said Mitch Furlong, Project Manager and Procurement Coordinator of Fluid Project Supply.

Dragon Jacket's Pocketed Coupling line is engineered to insulate and encapsulate all styles of twin bolt grooved couplings, and create attachment points to and from existing or additional insulation. Both products' standard size range is from 2 inches to 12 inches, but can be made in any size up to 36 inches to fit any specific application.

"The ease of installation and overall cost savings of these two new Dragon Jacket product lines is a major breakthrough in many industries enabling them to insulate and protect their investments," noted Mike Hanna, CEO of Dragon Jacket.
